Projects

React-accessible-searchbar   **React**

- A prebuilt react searchbar with **Accessibility, Autosuggest / Autocomplete** , Callbacks for search submission and value change
- The user can pass in props for a list of search suggestions and also receive callbacks for search submissions and input change.
- The library was built to help users have a prebuilt searchbar in place and not have to worry about its implementation
- The user can simply plug in the searchbar into their react application and start utilizing its features.

https://www.npmjs.com/package/react-accessible-searchbar

npm-tabs   **shell**

- An **autocompletion shell script** that autocompletes the commands based on the scripts declared in the package.json file.
- Utilizes jq to parse the package.json and extract a list of npm scripts as an array
- The list of parsed scripts are then presented to the user as a list of autosuggest options.
- The user can simply press on tab to view the list of options based on the currently typed command.
